

ATTRIBUTION SUMMARY: Who solved C0?

SOFTMAX MODEL:

- Lambda peaked at ep 1 (9.90), fell to 0 by ep 11
- Cost dropped 1166 -> 134 (ep 1-11) WITH lambda
- Cost dropped 134 -> 20 (ep 11-26) WITHOUT lambda
- 70% of epochs: reward alone (lambda = 0)
- Verdict: REWARD SHAPING is the primary driver
- Lambda provided initial push, reward sustained

GRADS MODEL:

- Lambda never dropped below 2.91
- Cost never dropped below 144 (7.2x Softmax min)
- r_ev_guard worsened (-0.6 -> -1.5) despite training
- Verdict: NEITHER solved C0. Lambda climbed to 13.3 but without effective reward shaping, cost plateaued

KEY EVIDENCE:

- At matched lambda (4-8): GradS cost = 606, SM cost = 781 but SM achieved cost = 20 when lambda = 0
- Softmax reward terms improved monotonically
- GradS reward terms oscillated (reward-cost conflict)
